Following last year's seminar, this year we again will hold a seminar in cooperation with Veson Nautical, the company that provides the Integrated Maritime Operations System [IMOS], and Maritime Asset Management System [MAMS] provided by SDSD, which is headquartered in London UK. These two partners service the world's leading shipping companies.

AIS will demonstrate TRANS-Account, the strategic maritime accounting system, a system that is compatible with IMOS and MAMS, and introduce TRANS-Owner, a financial projection system for ship owners.

This is a solution to build an optimized Maritime ERP composed of different vendors' products. This seminar is especially beneficial for those working in chartering, operations, ship management, accounting, or information systems departments. We encourage you to join us for this opportunity!
